

Create a table:

create 'emp', 'personal data', 'professional data'

List created table:

list

Scan data within table

scan 'emp'

Describe table

describe 'emp'

Alter column family

alter 'emp', NAME ⇒ 'personal data', VERSIONS ⇒ 5

alter 'table name', 'delete' ⇒ 'column family'

Check if table exists

exists 'emp'

Disable a table

disable 'emp'

Drop a table

First you need to disable and then drop

drop 'emp'

Insert data into table

put '<table name>', 'row key', '<colfamily:colname>', '<value>'

example:

put 'emp', '1', 'personal data:name', 'John'

```
put 'emp','1','personal data:city','Montreal'  
put 'emp','1','professional data:designation','manager'  
put 'emp','1','professional data:salary','15000'
```

Update data into table

```
put 'table name','row key','Column family:column name','new  
value'
```

Read a specific record

```
get '<table name>','<row key>'
```

Read a specific column of a record

```
get 'table name', 'row key', {COLUMN ⇒ 'column family:column  
name' }
```

Delete a specific cell

```
delete '<table name>', '<row>', '<column family:column name >','  
<time stamp>'
```

Delete a record

```
deleteall '<table name>', '<row key>'
```

Count records in a table

```
count '<table name>'
```

Truncate whole table

```
truncate '<table name>'
```
